

Canadian Larch Spec Sheet EZTMouldings

CANADIAN LARCH

High-quality sustainably sourced Canadian Larch precision machined for trade, construction, and restoration projects.

PRODUCT OVERVIEW

Canadian Larch is a strong and durable softwood valued for its excellent structural performance, attractive grain, and natural resilience. With its warm golden-brown tones, dense growth structure, and impressive strength-to-weight ratio, it is widely used across joinery, cladding, decking, and architectural timber applications.

At EZT Mouldings, our Canadian Larch is precision machined using advanced production equipment to deliver exceptional consistency, accuracy, and finish quality.

Suitable for both standard and bespoke mouldings, Canadian Larch offers outstanding durability and stability, making it an excellent choice for residential, commercial, and restoration projects where long-term performance is essential.

Canadian Larch timber is commonly used for cladding, decking, joinery, structural timber, garden structures, and architectural applications where strength, durability, and natural character are required.

Name: *Larix laricina* / *Larix occidentalis*

Origin: Canada

Colour: Pale yellow to golden-brown heartwood

Species: Softwood

Uses: Cladding, decking, joinery, structural timber, garden structures

Kiln Dried: Yes

Moisture Content: 10-16%

Durability: Moderately durable to durable

Exterior/Interior: Interior & Exterior

Grade: Select & Better

Mean Density: 590 Kg/m³
